EDUCATION

Technological University of the Philippines | Bachelor of Science In Information System | 2021 – Current

EXPERIENCE

Freelance Developer
Self-Employed

Completed multiple commissioned projects, including

- **ATM (C/C++)**: Developed an ATM simulation system demonstrating user account interactions and balance management.
- **BrewScape (Html,Css,JavaScript)**: Created a coffee shop application with inventory management, cart functionality, and user authentication using JavaScript and local storage.
- **Student Grading System (Python)**: Built a command-line tool to manage student grades and calculate averages for educational purposes.

PROJECTS

Responsive Coffee Shop Website
Tools & Technologies: React, HTML, CSS

- Developed a fully responsive coffee shop website with interactive features
- Designed user-friendly layouts and optimized components for seamless navigation

Math Practice Application
Tools & Technologies: React, HTML, CSS

- Built a responsive web application for practicing math operations: addition, subtraction, multiplication, and division
- Enhanced user experience with intuitive design and responsive functionality

Python Meat Inventory System
Tools & Technologies: Python, Tkinter, MySQL

- Developed an inventory management system for meat products.
- Integrated MySQL to handle database operations for storing and retrieving inventory data efficiently
