Bachelor of Science in Information System (BSIS)

EXPERIENCE

SKYWARD Technology Solution *February 2026 - Present*
Full Stack Developer

ESkyward Pay – E-Commerce & Payment Service Integration

- **Developed and maintained** an enterprise e-commerce platform using Laravel, React, TypeScript, Inertia.js, Tailwind CSS, shadcn/ui, and MySQL, **supporting core product, cart, checkout, and order workflows**.
- **Integrated** the ESkyward Pay payment service by implementing payment initiation, transaction verification, secure callbacks, webhook processing, and payment recovery workflows, **supporting reliable end-to-end payment processing**.
- **Designed** a reusable multi-service webhook architecture for business applications and third-party integrations, **standardizing event handling across services**.
- **Implemented** checkout, inventory, and transaction workflows using service-layer architecture and transactional database operations, **maintaining data consistency during critical business operations**.

Pay-It – FinTech Corporate Website & Payment Client UI

- **Developed and maintained** a responsive fintech platform using React, Vite, JavaScript, Tailwind CSS, and React Router, **converting Figma designs into production-ready interfaces across desktop and mobile**.
- **Built** reusable React components, custom hooks, and modular layouts, **reducing duplicated UI logic and improving maintainability**.
- **Developed** interactive features including news filtering, career listings, contact forms, and animations, **delivering consistent user experience across devices**.
- **Built** a payment client interface with status-driven routing for successful, pending, failed, expired, and not-found transactions, **preparing the interface for REST API and real-time payment updates through Axios, Laravel Echo, and Pusher/Reverb**.

Matabungkay Beach Hotel — Production Platform Modernization & Reliability

Framework& Platform Modernization

- **Upgraded** a production Laravel application from PHP 8.1/Laravel 9 to PHP 8.4/Laravel 13 using a staged migration strategy, **modernizing the platform while minimizing production disruption**.
- **Resolved** compatibility issues across Composer dependencies, Laravel packages, Symfony components, PHPUnit, and third-party libraries, **restoring compatibility with the upgraded application stack**.
- **Refactored** legacy code and performed regression testing, **preserving existing functionality while aligning the application with modern Laravel and PHP practices**.

Payment Split, Audit & Reconciliation

- Implemented **percentage-based payment splitting** at the gateway layer, automatically distributing each booking payment between the hotel merchant and the platform while keeping the merchant's share independent of platform fees.
- Built a **season-aware commission engine** driven by configurable traffic and off-peak rates based on the booking's check-in month, enabling rate changes through configuration without code modifications.
- Designed a **finance-grade audit and reconciliation system** that snapshots each split configuration before the payment request and verifies it against the gateway's webhook callbacks, flagging discrepancies with detailed reasons.
- **Engineered idempotent webhook reconciliation** across a multi-stage payment lifecycle, safely handling duplicate and out-of-order callbacks while persisting raw payloads and reconciliation results for a complete, traceable audit trail.

AWS SES Email Service Integration

- Integrated **Amazon SES** into a Laravel application while preserving the existing SMTP email workflow.
- Configured **AWS SES**, Laravel mail services, and environment settings to enable secure and reliable email delivery.
- Implemented **AWS SNS webhook** processing to handle email delivery notifications, bounces, complaints, and related email events.
- **Developed dedicated testing endpoints and performed integration testing** to validate SES email delivery and webhook processing without impacting production email services.

Email AuditTrail Viewer — Admin

- Built an admin audit trail consolidating Amazon SES/SNS events into per-email delivery timelines.
- Aggregated events by message ID to derive sent, delivered, bounced, and spam statuses.
- Implemented a secure cross-application architecture using shared database event data.

Guest Folio Transaction Split — Admin

- **Implemented a folio transaction-split workflow** allowing staff to divide a single unpaid charge into multiple payable transaction items with custom amounts.
- **Enforced exact amount reconciliation and transactional updates**, preventing billing discrepancies while atomically replacing the original charge with the resulting transaction items.

Synthetic Monitoring & Production Reliability (Checkly + Playwright)

- Implemented automated synthetic monitoring using **Checkly and Playwright** to continuously validate the production booking flow.
- Developed end-to-end tests covering the booking journey from **room search through payment**, with detection for JavaScript errors, HTTP 5xx responses, and browser policy violations.
- Configured **automated email notifications for monitoring failures and recoveries**, enabling proactive detection of booking-flow outages and faster incident response.

Freelance Web Developer

Digital Marketing Portfolio Website *— React, TypeScript, Supabase, Tailwind CSS, Shadcn*

- Delivered a professional portfolio site for a digital marketing strategist to **showcase experience, campaign achievements, and drive client inquiries**.
- Built a **full-stack single-page app** with **React, TypeScript, and Supabase**, including a custom **admin CMS with authentication, role-based protected routes, image uploads through Supabase Storage**, and a **Web3Forms-powered contact form**.
- Launched a **self-manageable portfolio** that lets the client **update content in real time and receive inquiries directly**, reducing the need for developer support on every edit.

Marvill Web Development *4 Months*
Intern Full Stack Developer
Ticket Management System *– Laravel, PHP, MySQL*

- Developed backend functionality for a **role-based ticket management system** supporting Admin, Support, and User access levels.
- Implemented backend logic for **ticket creation, task assignment, responses, progress tracking, and user management** using Laravel and MySQL.
- Built **email verification and automated notification workflows** for key ticket events, improving communication and ticket status visibility

CERTIFICATIONS AND TRAINING

Agentic AI Foundations **—** AWS Training Partner / Trainocate (September 2026)
Claude Code Beginner to Pro: Agentic Coding & Development **—** *Udemy* (September 2026)

PROJECTS

Gym Management *– MongoDB, React, Express, Nodejs*

- Built a full-stack gym management system for users, members, trainers, and subscriptions with CRUD functionality and role-based access control.
- Implemented RESTful backend functionality with Node.js/Express and MongoDB, with a responsive React/Tailwind interface.

BlogSpace *– React, Typescript, Supabase*

- Built a full-stack blogging platform with authentication, role-based access, CRUD functionality, and real-time comments using Supabase.
- Designed a responsive interface with Tailwind CSS and Framer Motion.

TECHNICAL SKILLS

Frontend: JavaScript**,** TypeScript, React, Inertia.js, Zustand, Redux, Tailwind CSS, Bootstrap, Shadcn/ui, HTML, CSS, Vite
Backend: Laravel, PHP, Node.js, Express.js, REST APIs, Laravel Reverb, Composer
Database: MongoDB, MySQL, Supabase
Cloud & Services: Amazon SES, Amazon SNS
Monitoring & Testing: Datadog RUM, Checkly, Playwright
AI & Developer Tools: Claude, Codex, Kiro, Git, GitHub, Bitbucket, Postman
